### **Risk Warning**

Trading in Contracts for Difference ('CFDs') carries a high level of risk and can result in the loss of all your investment. As such, CFDs may not be appropriate for all investors. You should not invest money that you cannot afford to lose. Before deciding to trade, you should become aware of all the risks associated with CFD trading, and seek advice from an independent and suitably licensed financial advisor. Under no circumstances shall we have any liability to any person or entity for (a) any loss or damage in whole or part caused by, resulting from, or relating to any transactions related to CFDs or (b) any direct, indirect, special, consequential or incidental damages whatsoever. For more information about the risks associated with trading CFDs please find and read our '[General Risk Disclosure](#)'.

Forex24 Global does not provide services to residents of the USA, Canada, Japan, North Korea, Iran, Belgium and some other regions.

### **WHAT IS THIS PRODUCT**

#### **TYPE**

This document relates to products known as 'contracts for difference', which are also known as CFDs. A CFD allows you to obtain an indirect exposure to an underlying asset such as a security, commodity, index and other asset types. This means you will never own the underlying asset, but you will make gains or incur losses as a result of price movements in the underlying asset.

This document provides key information on CFDs where the underlying investment option that you choose is a share such as Lloyds, Apple, or Tesla Motors shares. Shares, also known as stocks or equities, represent units into which a company's capital is divided for investment and ownership purposes.

The shares we currently offer CFDs on are found at <https://www.forex24.com/trading/trading-specification/>.

### **OBJECTIVES**

The objective of trading CFDs is to speculate on price movements (generally over the short term) in an underlying asset. Your return depends on movements in the price of the underlying asset and the size of your position. For example, if you believe the value of a share is going to increase, you would buy a CFD (also known as "going long") with the intention to sell it at a higher value. The difference between the price at which you buy and the price at which you subsequently sell equates to your profit, minus any relevant costs (detailed below). If you think the value of a share is going to decrease, you would sell a CFD (also known as "going short") at a specific value, expecting to buy it back at a lower price, resulting in us paying you the difference minus any relevant costs. However, in either circumstance, if the share moves in the opposite direction and your position is closed, either by you or as a result of a margin call (detailed below), you would owe us the amount of any loss you have incurred, subject to our negative balance protection.

### **INTENDED RETAIL INVESTOR**

Trading in this product will not be appropriate for everyone. This product would commonly be used by persons who want to generally gain short term exposures to financial instruments/markets; are using (trading with) money which they can afford to lose; have a diversified investment and savings portfolio; have a high-risk tolerance; and understand the impact of and risks associated with margin trading.

### **WHAT ARE THE RISKS AND WHAT COULD I GET IN RETURN**

#### **Risk Indicator**

Lower Risk

Higher Risk

The summary risk indicator is a guide to the level of risk of these products compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you. We have classified these products as 7 out of 7, which is the highest risk class. This is because there is a very high chance you could lose up to 100% of your trading account balance (subject to our negative balance protection).

CFD trading requires you to maintain a certain level of funds in your account in order to open position(s) and to keep your position(s) open. This is called the initial margin and maintenance margin respectively. You will be able to open a position by depositing only a small percentage of the notional value of the position, creating a leveraged position. Leverage enables you to open bigger positions using a small amount of capital in your account. Leverage can significantly magnify your gains and losses.

If the funds in your account decrease to the point that they will soon become insufficient to keep your position(s) open – meaning that your equity is getting close to the total maintenance margin - a margin alert will be issued, asking you to consider depositing additional funds. If you fail to deposit additional funds and the market continues to move against you, we may close your position(s) (immediately and without notice) and you will realize any losses.

Our CFDs are not listed on any exchange, and the prices and other conditions are set by us in accordance with our best execution policy. The contract can be closed only with us, and is not transferable to any other provider. If you have multiple positions with us, your risk may be cumulative and not limited to one position.

The tax regime of the country in which you are domiciled may impact your return.

This product does not include any protection from future market performance, so you could lose some or all of your investment. This includes both your deposit(s) as well as any accumulated profits.

If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section 'what happens if Forex24 Global is unable to pay out'). The indicator shown above does not consider this protection.

**PERFORMANCE SCENARIOS**

There are a number of types of trading risk, including leverage risk, which you should be aware of before beginning to trade. Information on factors that affect the performance of this product are detailed here - including but not limited to: Leverage risk of unlimited loss, Margin risk, Foreign exchange risk, Market risk, Unregulated market risk, Market disruption risk, Counter-party risk, Online trading platform and IT risk Conflicts of interest Specific trading.

This table shows potential profit and loss under different scenarios. The scenarios assume you have a starting equity of \$1000 and choose to buy/sell 100 Stock CFD Contracts. This particular CFD contract has a pip cost of \$0.1 per contract, meaning in this case you will make or lose \$10 for every pip the price moves. A pip on this instrument is second digit after the decimal place. The price at which you can buy is \$27.800

The below table does not include overnight holding costs.

Scenarios		Trade P/L	New Equity
Stress scenario: You go long and the price falls by 30 pips and you then receive a margin call	Open Price: 27.800 Close Price: 27.500	\$-30	\$970
Unfavourable scenario: You go short and price increase by 7 pips and you exit the position.	Open Price: 27.800 Close Price: 28.500	\$-70	\$990
Moderate scenario: You go long or short and exit the position at the same rate you entered	Open Price: 27.800 Close Price: 27.800	\$0	\$1000
Favourable scenario: You go Long and price increases by 5 pips and you exit the position	Open Price: 27.800 Close Price: 28.000	\$50	\$1020

## **WHAT ARE THE COSTS**

One off Costs	Spread	The difference between the buy price and the sell price is called the spread. This cost is realised each time you open and close a trade.
Open and Close	Commission	Commission is charged at both open and close and will vary depending on the instrument traded and the size of your position. Some accounts do not have any additional commission charges. Charges are laid out in our website <a href="https://www.forex24.com/trading/account-comparison/">https://www.forex24.com/trading/account-comparison/</a>
Ongoing Costs	Rollover (Swaps) Debit or Credit	<p>Rollover is the interest paid for holding a position overnight.</p> <p>Any client holding an open position at the end of the trading day will be debited/credited rollover.</p> <p>On Wednesday night the swap is charged for 3 days and this is to account for the weekend days, where the swap is charged for 1 day over Friday to Monday.</p>
Ongoing Costs	Dividend Adjustments	<p>CFDs on stocks are subject to dividend adjustments. When a stock security pays dividend to its shareholders, dividend adjustments will be made to the trading accounts of clients who hold a position on the Stock.</p> <ul style="list-style-type: none"><li>• Long Positions (Buy) – Clients holding long positions on the ex-div date will receive a dividend in the form of a cash adjustment (CD).</li><li>• Short Positions (Sell) – Clients holding short positions on the ex-div date will be charged the dividend amount in the form of a cash adjustment (CW)</li></ul>
